SOC 1 Type II Readiness (SSAE 18) — RESTAURANTBILLING

Company: Anticloud FZ LLE **Scope:** Financial Reporting Controls

Scope

RESTAURANTBILLING may be used in financial reporting contexts where user organizations require assurance over controls affecting financial data integrity.

Control Objectives

Objective Control Test Result
--- --- --- ---
CO-1: Data Integrity AIOSS append-only ledger on all mutations Chain hash verification PASS
CO-2: Access Control Zero-trust mTLS, no shared credentials mTLS handshake test PASS
CO-3: Audit Trail Provenance chain: input→output hashes Hash roundtrip test PASS
CO-4: Encryption AES-256-GCM at rest, scrypt key derivation Known-plaintext test PASS
CO-5: Change Management Deterministic builds, binary hash in manifest Source→binary hash PASS
CO-6: Availability Offline-first, single binary, no cloud SLA Cold-start test PASS
CO-7: Incident Detection Local observability, AIOSS anomaly detection Chain break test PASS

Complementary User Entity Controls (CUECs)

User organizations are responsible for:
- Physical security of deployment hardware
- Network perimeter security
- Key management (Sovereign Memory password)
- User access provisioning via mTLS cert issuance

Conclusion

RESTAURANTBILLING provides a control environment suitable for financial reporting contexts requiring offline, auditable, tamper-evident data processing.
